Submission Deadline: 5:00pm, Friday May 22, 2020  
Funding Range: Each funded up to $25,000  
Funding target start date: June 5, 2020  

OVERVIEW and ELIGIBILITY

The Rockefeller University Center for Clinical and Translational Science (RUCCTS), solicit requests for pilot projects to support:

- New and innovative clinical and translational studies
- New collaborations that are innovative and advance clinical or translational research.
- Projects from Clinical Scholars and from basic investigators that extend their studies to clinical or translational research
- Projects engaging community partners
- Translational proposals from community researchers engaging Rockefeller scientists
- Pilot projects that utilize CTSA Program resources and The Rockefeller University Hospital

In the event a trainee submits a proposal, the Background and Significance section should explain how the supported research will advance the career and training goals of that individual.

Pilot projects are expected to be completed within a 1-year time frame. A second year of funding is possible, but will be determined after a progress report for the first year is submitted and the funding will be competitive with new submissions. Approximately 8 awards will be made this year. Up to 2 awards may be made in the area of community-engaged research, and up to 6 additional awards in translational research. A statement regarding the potential public health impact of the research is required in all proposals.

Please note this announcement is for CTSA-supported pilot projects only that are directed towards a specific scientific outcome as a unique project or as a stand-alone aim of a larger project. An announcement will go out in July to support digestive disease, and additional translational projects.

PREVIOUSLY FUNDED PILOT PROJECTS: PIs of Pilot Projects funded in 2019-2020 are required to resubmit a full application if they wish to be considered for a second year of funding in 2020-21. In addition to the information listed above, these applications must include a summary of progress during the first year and a description of efforts (planned or already made) to obtain external funding to continue the project

FUNDING and EXPENDITURE

A maximum of $25,000 in direct costs can be requested. Funding may be used to support other than personnel costs such as materials, laboratory supplies, assays, animal costs, consultants, recruitment costs, participant compensation, domestic conference travel, etc. Funding may not be used to support any clinical trials beyond Phase IIB with the exception of Phase III clinical trials for the treatment of rare diseases. Funding may not be used to support salary, time/effort or institutional indirect costs.
HOW TO APPLY

Applications must be received on or before 5:00 PM, ET, on May 22, 2020

All applications are to be uploaded to the pilot project online submission system. You can access the system at https://pilotprojects.rockefeller.edu Please note you will need to register in order to submit your application online. Paper and email submissions will not be accepted.

A confirmation e-mail will be sent when your submission is successfully received.

CONTENT AND FORM OF APPLICATION

FORMAT SPECIFICATIONS
Follow format and font specifications as outlined below. Applications that do not follow instructions will be deemed non-responsive to this FOA.

- Use Arial typeface and a font size of 11 point only
- Use one-half inch margins (top, bottom, left, and right) for all pages of the FOA
- Place last, first name in the header of your application

No more than 6 pages for sections 1-5, the application should contain the following:
(Applications longer than 6 pages will be deemed non-responsive to this Funding Opportunity Announcement)

1. Specific Aims
2. Background and Significance
3. Preliminary Studies, if relevant
4. Research Design and Methods
5. Project Timeline
6. Literature Citations
7. Budget and budget narrative (budget justification)
8. Biographical sketches
9. Letter(s) of collaboration/support
10. Letter of commitment from partnering faculty/institution (if applicable)
11. Use of Vertebrate Animals (if applicable)

ABSTRACT

The application should include a brief abstract. That abstract should contain an explanation of how the proposed project will accelerate the development of a clinical or translational project and how the proposed research will address an issue of significance to human health and what impact it may have on population health. Your abstract should be no longer than 1500 characters (including spaces).

Although this submission is based on key elements of the PHS 398 form, the entire application should be brief, no longer than 6 pages. If the study involves a design where statistical methods are used to determine the number of subjects that need to be studied, that statistical information should be included as a part of Research Design and Methods section.

Applicants submitting research proposals including human subjects research (including samples-only research) are encouraged to consult the Research Facilitation Office x7886 (dbrassil@rockefeller.edu), the IRB x8411, and the Clinical Research Support Office x8408 (kostr@rockefeller.edu) for at least preliminary discussions about feasibility and protocol design. If a study involves vertebrate animals, the five points detailed below should be included but will not count towards the 6-page length. Plans to use core resources of the Center for Clinical and Translational Science are highly encouraged and should be explained in Research Design and Methods, if relevant.
FOR HUMAN SUBJECT PROPOSALS
If human subjects are involved in the pilot project you are proposing, in addition to the items above, please include the following:

Protection of Human Subjects section that clearly describes the risk, protections, benefits and importance of the knowledge to be gained by the activities outlined in your pilot project application

Inclusion Plan for Women, Minorities and Children

Targeted Enrollment Table or Inclusion Data Record (IDR) – See Pilot project submission system for form download

Data and Safety and Monitoring plan (DSMP) if applicable

FOR PROPOSALS REQUESTING THE USE OF VETERBRATE ANIMALS
Applications involving live vertebrate animals must address the following criteria:

1. Description of Procedures. Provide a concise description of the proposed procedures to be used that involve live vertebrate animals in the work outlined in the Research Strategy section. Identify the species, strains, ages, sex, and total number of animals by species to be used in the proposed work. If dogs or cats are proposed, provide the source of the animals.

2. Justifications. Provide justification that the species are appropriate for the proposed research. Explain why the research goals cannot be accomplished using an alternative model (e.g., computational, human, invertebrate, in vitro).

3. Minimization of Pain and Distress. Describe the interventions including analgesia, anesthesia, sedation, palliative care, and humane endpoints to minimize discomfort, distress, pain, and injury.

4. Method of Euthanasia. Provide a justification for methods of euthanasia that are not consistent with the American Veterinary Medical Association (AVMA) Guidelines for the Euthanasia of Animals. If answer is “No” to the question “Is method consistent with AVMA guidelines?”, describe the method and provide scientific justification in the text field provided.

If the involvement of animals is indefinite, provide an explanation and indicate when it is anticipated that animals will be used.

FOR COMMUNITY-ENGAGED RESEARCH PROPOSALS
The Rockefeller University Center for Clinical and Translational Science (RUCCTS) aims to increase access to research in communities by supporting community/academic research partnerships and collaborations that are both relevant and responsive to the health needs of the community. Research projects must be designed with input from the community, to enhance practical as well as theoretical understanding of community health issues, and include creative strategies for addressing community-identified problems by bringing together academic and community partners. In addition to the content and form of the application above, proposals should include a brief description of the problem under investigation as identified with a community partner, provide a description of procedures for conducting the community-based research study and include a timeline. Proposals should describe the importance and significance of the results or findings that are likely from the research and its benefit to the community. The proposal should outline plans for publication and presentation of the results once the project is completed.

REVIEW CRITERIA

Projects will be evaluated on the basis of scientific and technical merit and clinical and translational impact, as...
well as the potential of the research to advance the career of a trainee. The applications will be reviewed by the Oversight of Pilot and Collaborative Translational and Clinical Studies subcommittee of the Advisory Committee for Clinical and Translational Science (ACCTS) and presented to the ACCTS for final determination of funding. Once a project is evaluated for its scientific and technical content and recommended for funding, funding will be contingent on the investigator obtaining ACCTS and IRB approval for human subjects protocols and ACCTS and IACUC approval for studies involving vertebrate animals. For community-engaged research projects applicants must provide a letter of commitment from the partnering faculty/institution. Proposals in this category must incorporate community involvement in the design and, where appropriate, focus on having a positive health impact on the participating community.

**AWARD ANNOUNCEMENT**

Awards will be announced on or by June 5, 2020.

**TERMS OF AWARD**

Prior to award, applicants will be informed of the applicable terms and conditions of award for pilot projects. Applicants awarded CTSA supported projects will be expected to expend all of the funds before May 31, 2021.

**INQUIRIES**

Address inquiries to Maija Neville-Williams, Administrative Director at mwilliams@rockefeller.edu.

Please share this announcement with Rockefeller University faculty colleagues who may be interested in submitting a proposal.
